

"Normal" proofs: want $\underline{A \Rightarrow E}$

$$A \Rightarrow B \quad (\text{Axiom 1})$$

$$B \Rightarrow C \quad (\text{algebra})$$

$$C \Rightarrow D \quad (\text{other theorem})$$

$$D \Rightarrow E \quad (\text{other other theorem})$$

New technique: induction.

Usual setting: have some parameterized statement,
with parameter $n \in \mathbb{N}$.

Call this $T(n)$.

E.g., $T(n)$ might state that

$$\sum_{i=1}^n i = \frac{n(n+1)}{2}$$

Blueprint for induction:

① Prove a "base case": prove
 $T(n)$ explicitly for small values of n ,
e.g. $n=1$.

\square in the above: $\sum_{i=1}^1 i = \frac{1(1+1)}{2} = 1$ ✓

② Show $T(n) \Rightarrow T(n+1)$:

Assuming $T(n)$, $\sum_{i=1}^n i = \frac{n(n+1)}{2}$.

Then $\sum_{i=1}^{n+1} i = \sum_{i=1}^n i + (n+1)$

$$\begin{aligned}
 &= \frac{n(n+1)}{2} + (n+1) \quad \left(\begin{array}{l} \text{using assumption} \\ T(n) \\ \text{true} \end{array} \right) \\
 &= \frac{n(n+1) + 2(n+1)}{2} \\
 &= \frac{(n+1)(n+2)}{2} \quad \checkmark \\
 &\equiv T(n+1).
 \end{aligned}$$

Note: we've proved that a "normal" proof exists for any value of $n \geq 1$:

$$\begin{array}{ccccccc}
 T(1) & \Rightarrow & T(2) & \Rightarrow & T(3) & \Rightarrow & \dots \Rightarrow T(n) \\
 \uparrow & & \textcircled{2} & & \textcircled{2} & & \textcircled{2} \\
 \text{explicit} & & & & & & \\
 \text{in } \textcircled{1} & & & & & & \\
 \text{(base case)} & & & & & &
 \end{array}$$

Recursion: example: compute $n!$

```

int fac (int n)
{
    //base case:
    → if (n == 0) return 1;
    // note  $n! = n \cdot (n-1)!$ 
    return  $n \cdot \text{fac}(n-1)$ ;
}

```

$f(2)$

```
cout << "calling .  
:f(n==0)  
return;
```

$P(n-1);$

~~cout << "leaving..."~~

$f(1)$

```
cout << "calling .  
:f(n==0)  
return;
```

$P(n-1);$

~~cout << "leaving..."~~

$f(0)$

```
cout << "calling .  
:f(n==0)  
→ return;
```

~~$P(n-1);$~~

~~cout << "leaving..."~~

Note: return statement
exits function!
Hence this part
won't happen

int fib(int n)

```
{  
    if (n < 2) return 0;  
    return fib(n-1) + fib(n-2);  
}
```
